AT THE START... CONSIDER THE **FINISH.**

Steel Art has always been synonymous for its superior finish quality. That has never been more true than it is today. Below, are some examples of the metal materials we offer. To the right, are the most popular finishes, but are not limited to these. You can view our entire line in our "Metal Finishes" catalog. Contact your Project Manager for more details.

Mirror Polish

STAINLESS STEEL

Stainless Steel alloy 304 is a general purpose alloy, very durable and easy to maintain in exterior and interior applications. Alloy 316 performs better in highly corrosive, salt air environments, such as industrial, coastal vicinities or areas know for high levels of atmospheric pollution. All stainless steel products are automatically passivated when in exterior applications. This process aids in inhibiting oxidation and staining.

Satinbrite™

ALUMINUM

Aluminum alloy 5052 is offered because of its strength, corrosion resistance and value. Aluminum presents a naturally beautiful luster regardless of the finish chosen. Natural aluminum is protected with weatherometer proven, clear interior lacquer or exterior powder coat.

Mirror Polish

BRASS

Brass alloy 280 provides a distinguished gold appearance. Virtually all available finishes offer a warm architectural look in interior applications, while shades of oxidation perform well in both the interior and exterior. All brass designs have a protective clear coat.

Satinbrite™

BRONZE

Bronze alloy 220 provides a distinguished reddish gold appearance. Virtually all available finishes offer a warm architectural look in interior applications, while shades of oxidation perform well in both the interior and exterior. All bronze designs have a protective clear coat.

Non-Directional

COPPER

Copper alloy 110 provides a distinguished reddish appearance. Virtually all available finishes offer a warm architectural look in interior applications, while shades of oxidation perform well in both the interior and exterior. All copper designs have a protective clear coat.

NuGold™
Satin Brushed

TITANIUM

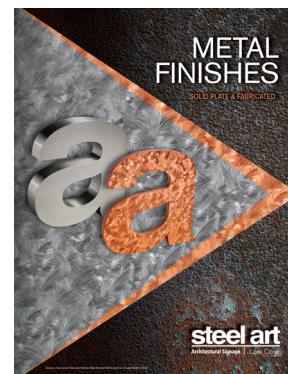

Titanium coated stainless steel offers enhanced durability for exterior applications and a beautiful alternative for interiors. NuGold™, NuBronze™, NuCopper™, Black and Medium Oxidize are titanium coated stainless steel 304. These materials are a cost-effective alternative to brass, bronze, and copper with a Ten Year Warranty for exterior applications. All Titanium designs are available without a silver edge, which makes them ideal for "eye level" installations.

Bright
Brushed Gold

ANODIZED ALUMINUM

Aluminum presents a naturally beautiful luster. When extreme durability, architectural embellishment and "value engineering" is of major concern, these color anodized fabricated letters must be considered. Guaranteed for 15 years in exterior application and available in a myriad of architectural colors and finishes they are a fit for any project.
