UV Colorlast A New Option in Multi-Color Logos

UV Colorlast is a new finishing process for multi-color logos that offers customers a cost-effective, exterior-grade product delivered faster than traditional multi-color paint without sacrificing quality. Suitable for Flat Cut Acrylic and Flat Cut Metal materials, UV Colorlast is a combination of mask and painting and UV print that provides customers with a premium quality multi-color logo backed by Gemini's Lifetime Guarantee.

UV Colorlast expands design capabilities with color gradients and many detailed colors you couldn't get with traditional full-color paint. Letters and logos are painted with a base color then additional elements are UV printed to create the design. After UV printing, letters and logos are sealed with a clear gloss topcoat to protect the product from atmospheric elements. A gloss clear coat is recommended, but satin and matte are also available. This process offers the longevity of paint and design freedom of UV-print. Utilizing a CMYK print process, we recommend requesting a traditional full-color painted logo when exact PMS colors are required for the entire project. We can color match the painted base coat to your PMS or custom color, but other additional design elements will be UV printed. UV Colorlast is also a great alternative for traditional UV printed projects.

WHY UV COLORLAST

- Cost-effective compared to traditional multi-color masked and painted jobs
- Lifetime warranty on interior and exterior installations
- Reduced production times allow for faster delivery without sacrificing quality
- Expanded design capabilities with gradients and detailed artwork
